

## AOC Launches "Jenio" Widescreen LCD Monitor Range

**Sydney, Australia (12 August 2008)** – The new Jenio series of Widescreen LCD Monitors from AOC combine technology and ergonomics in a highly attractive design. Both the 19" 919Pwz and 22" 2219P2 feature adjustable height and a screen that pivots from landscape to portrait orientation. Most documents and webpages are tall rather than wide, so it is typically far more comfortable and productive to view and edit them in portrait mode.

In either position, the 19" model offers higher definition than your regular 19" widescreen panels, with 1680 x 1050 resolution rather than the usual 1440 x 900. This makes the Jenio series is the perfect monitor for both home, corporate and creative applications. Physical appearance is enhanced by an elegant two-tone silver and black bezel design with the added bonus of a built-in stereo speakers providing a functional audio playback.

The screen display benefits from a super-fast 2ms (GTG) response time and 10,000:1 dynamic contrast ratio ideal for playing the latest games by minimising fast moving objects from becoming blurred. Jenio monitors accept VGA and DVI input and are HDCP and Windows Vista Premium ready. Jenio monitors are now available from AOC distributors.

### Features Summary

2ms GTG Fast Response Time- to display motion images without blurring.
